# Daniel Ives

Highlands Ranch, Colorado | 720-243-3328 | danielives01@gmail.com | LinkedIn | GitHub | Website

- I'm a software engineer at Bamboo Rose, modernizing an enterprise PLM application.
- I moonlight as a sports drummer and a music educator.

## Professional Experience

**Bamboo Rose** - Remote, Colorado
*Senior Software Engineer* | 2026 - Present

- Built an internal AI agent with the OpenCode SDK, integrating Slack and Bitbucket for bug triage, fixes, and code review.
- Designed an AI-assisted characterization testing approach to improve developer confidence and system stability while modernizing a legacy application.
- Mentored 2 frontend engineers to become full-stack contributors, teaching Java fundamentals and enabling them to independently build features in the new API suite within 2 weeks.
- Built a scheduled Azure Functions integration with the CPSC portal, using state-machine logic to automate asynchronous batch uploads in a previously manual submission workflow.

*Software Engineer* | 2023 - 2025

- Architected and built a greenfield multi-tenant reporting service with Spring Boot and Next.js, including custom authentication bridging the new service with a single-tenant legacy system.
- Drove AI tool adoption across the engineering team by onboarding engineers to Cursor and building custom skills and integrations for our bespoke systems.
- Led modernization by embedding React micro-frontends into the legacy application and architecting a modern OpenAPI REST layer with a clean repository abstraction, enabling incremental development while isolating legacy dependencies.

**Backbone PLM (Acquired by Bamboo Rose)** - Boulder, Colorado
*Junior Software Engineer* | 2021 - 2023

- Built full-stack features using Angular, Vue, Express, and MongoDB for an AWS-hosted apparel PLM platform.

## Other Projects

**Legally Distinct Global Domination** - https://global-domination.daniel-ives.com

- Built a finite-state machine tracking an entire game of Risk, shared by the React frontend and Convex backend.
- Added Resend email notifications, Slack webhooks, and support for multiple maps, team or solo play, and configurable game rules.
- Built primarily with GPT-5.4 using the Codex CLI, Codex app, and Zed editor.

**cozytab** - https://cozytab.club

- Created a multiplayer room decorator app with a React frontend, Convex real-time database, and Clerk auth service.
- Built a separate Cloudflare Durable Objects service powering real-time cursors and chat.
- Implemented daily rewards, referrals, and Stripe payments for a freemium business model.
- Built mostly with Cursor and GPT-5.2-Codex.

**Moonlander** - https://moonlander.rocks

- Built a lunar landing simulator with an integrated code editor using React, TypeScript, and Three.js.
- Attracted 250+ users in its first weekend.

## Skills

**Languages, Frameworks & Cloud**: TypeScript, Python, React, Vue.js, Java, Spring Boot, SQL, MongoDB, AWS, Azure Functions
**AI, Tooling & Observability**: AI agents/SDKs (OpenCode, Cursor, Codex), Datadog, New Relic, Git, Linux, Vim, Tailscale

## Education

**Colorado State University** | Fort Collins, Colorado | 2020 - 2023

- B.S. in Computer Science
- CSU College of Natural Sciences Dean's List, 4.0 GPA, Graduated summa cum laude
