- I'm a software engineer at Bamboo Rose, modernizing an enterprise PLM application.
- I strongly think software fundamentals and system design matter more than ever.
- I moonlight as a sports drummer and a music educator.

Professional Experience

Bamboo Rose - Remote, Colorado

Senior Software Engineer | 2026 - Present

- Mentored 2 frontend engineers to become fullstack contributors, teaching Java fundamentals and empowering them to independently build features in the new API suite within 2 weeks.
- Built an internal AI agent using OpenCode SDK with connection to company Slack and Bitbucket for bug triage, quick fixes, and code review.
- Architected AI-written characterization tests to improve developer confidence and system stability as we modernize a legacy application.

Software Engineer | 2023 - 2025

- Architected and built greenfield multi-tenant reporting service (Spring Boot + Next.js) from the ground up, including custom auth solution bridging multi-tenant to single-tenant legacy system.
- Drove AI tool adoption across the engineering team, onboarded team to Cursor, built out custom skills and connections to empower agents to use our bespoke systems.
- Led modernization by embedding React micro-frontends into legacy app and architecting modern OpenAPI REST layer with clean repository abstraction, enabling incremental feature development while isolating legacy dependencies.

Backbone PLM (Acquired by Bamboo Rose) - Boulder, Colorado

Junior Software Engineer | 2021 - 2023

- Built fullstack features using Angular, Vue, Express, and MongoDB across apparel PLM platform

Other Projects

Legally Distinct Global Domination - <https://global-domination.daniel-ives.com>

- Built finite state machine tracking the entire game of Risk in typescript, used by react frontend and convex backend
- Email notifications with Resend, Slack webhook support, various game types (different maps, team/solo play, different game rules)
- Built primarily with GPT-5.4 inside Codex CLI/app and the Zed editor

cozytab - <https://cozytab.club>

- Created a multiplayer room decorator app with a react frontend, Convex real-time database, and Clerk auth service
- Separate Cloudflare Durable Objects service for real-time cursors and chat
- Implemented freemium model daily rewards, referrals, and Stripe payment option
- Built mostly with Cursor and GPT-5.2-codex

Moonlander - <https://moonlander.rocks>

- Built Lunar landing simulator with integrated code editor using React, TypeScript, and Three.js
- Attracted 250+ users in first weekend
- Built largely with OpenCode and Grok code fast 1, which meant a lot of hand coding too

Skills

Languages, Frameworks, DBs: TypeScript, Python, React, Java, Spring Boot, Angular, Vue.js, SQL, MongoDB, Convex

Tooling: Git, Linux, Vim, AI agents/tools (opencode, cursor, codex, T3 code), Tailscale

Education

Colorado State University | Fort Collins, Colorado | 2020 - 2023

- B.S. in Computer Science
- CSU College of Natural Sciences Dean's List, 4.0 GPA, Graduated summa cum laude
